Diazepam: Diazepam is contraindicated in patients with a history of allergy to diazepam or any of the components of the preparation.

Drug interactions:
- Avoid concurrent use with triptorelin or other GnRH analogues.
- Caution is recommended if using triptorelin concomitantly with other medications known to prolong the QT interval or cause hypotension.
- Pregnant women or lactating females should avoid using triptorelin to prevent teratogenic effects.

Adverse reactions:
- Common: Nausea, vomiting, diarrhoea, headache, dizziness, hot flushes, back pain, abdominal distension, increased bone mineral density.
- Uncommon: Abnormal uterine bleeding, cysts, ovarian cysts, injection site reaction, fatigue, influenza like illness, upper respiratory tract infection, pharyngitis, dysmenorrhoea, ovarian hyperstimulation syndrome, dyspnoea, abdominal discomfort, hyperhidrosis, pruritus, rash, angioedema.
- Rare: Anaphylaxis, sleep disorder, libido decreased, visual impairment, vision blurred, dyspnoea, abdominal discomfort, hyperhidrosis, pruritus, rash, angioedema, dysmenorrhoea, ovarian cyst, injection site pain, injection site reaction, fatigue, influenza like illness.

Precautions:
- Pregnancy: Use during pregnancy only if clearly needed.
- Effects on ability to drive and use machines: No studies on the effects on the ability to drive and use machines have been performed. Due to its pharmacological profile, use during pregnancy is likely to have no or minimal effects on driving and machine use.

contraindications:
- Known hypersensitivity against triptorelin or another ingredient of the drug
- Hypersensitivity to gonadotrophin-releasing hormone (GnRH) or any other GnRH analogue
- Hypersensitivity to the active substance or to any of the excipients

DECAPEPTYL® is contraindicated in patients with:
- Hypersensitivity to gonadotrophin-releasing hormone (GnRH) or any other GnRH analogue
- Hypersensitivity to the active substance or to any of the excipients

Pharmaceutical form:
- DECAPEPTYL 0.1 mg is injected subcutaneously. DECAPEPTYL is a hormone for long-term treatment. The duration of the therapy is fixed by the physician.

undesirable effects:
- Mood changes, including depression have been reported. Patients with a history of depression or predisposition to depression should be appropriately evaluated and monitored during therapy.
- Patients should be informed accordingly and treated as appropriate if symptoms occur.
- Special care should be taken in women with signs and symptoms of active allergic conditions or known history of allergic predisposition. Treatment should be discontinued temporarily if allergic reactions are observed.
- There is an increased risk of incident depression (which may be severe) in patients undergoing treatment with GnRH agonists, particularly if used for long periods of time.
- Overdose in humans may result in a prolonged duration of action. In case of overdose, DECAPEPTYL® treatment should be (temporarily) discontinued.

Interactions:
- DECAPEPTYL® contains diazepam; therefore, diazepam interactions with other medicines are also applicable.
- Diazepam may reduce the analgesic effects of triptorelin.
- Diazepam may increase the sleep-inducing effects of triptorelin.
- Diazepam may decrease the CNS stimulant effects of triptorelin.

compatibility:
- Solution for injection

Additional information:
- DECAPEPTYL® is contraindicated in patients with:
- Known hypersensitivity against triptorelin or another ingredient of the drug
- Hypersensitivity to gonadotrophin-releasing hormone (GnRH) or any other GnRH analogue
- Hypersensitivity to the active substance or to any of the excipients

Incompatibilities:
- Water for injections
- Sodium chloride
- Solutions for injection

Pharmaceutical form:
- DECAPEPTYL® 0.1 mg/1 ml solution for injection

Solution for injection
- DECAPEPTYL contains diazepam; therefore, diazepam interactions with other medicines are also applicable.
- Diazepam may reduce the analgesic effects of triptorelin.
- Diazepam may increase the sleep-inducing effects of triptorelin.
- Diazepam may decrease the CNS stimulant effects of triptorelin.

compatibility:
- Solution for injection

Additional information:
- DECAPEPTYL contains diazepam; therefore, diazepam interactions with other medicines are also applicable.
- Diazepam may reduce the analgesic effects of triptorelin.
- Diazepam may increase the sleep-inducing effects of triptorelin.
- Diazepam may decrease the CNS stimulant effects of triptorelin.
